## GOLIATH G400

High-Compaction Rear Loader

# Two-Year Warranty, 4 Yd<sup>3</sup> Hopper, and Leak-Proof Hydraulics Highlight The Next-Generation Goliath

*Since its introduction nearly three decades ago, E-Z Pack's Goliath rear loader has become an industry standard for durability, solid performance, high compaction and easy operation. With those kinds of credentials, improvements don't come easy. But the new Goliath G400 has raised the bar once again, starting with an unprecedented two-year body warranty and a massive 4 cubic yard hopper.*

### The 2-Year Warranty

The basic heart of the Goliath hasn't changed, which means Smart Steel construction, Powder Coat paint, swing link packing design, and simple, direct controls. Goliath's history for dependability is well documented, which is why E-Z Pack proudly introduces the industry's first 2-year warranty with the Goliath G400. Not only do you get superior performance with the G400, you'll also get an extra measure of confidence and peace of mind.

### 4 Yd<sup>3</sup> Hopper

The G400 hopper is the largest in the industry, which means you'll need fewer cycles to handle commercial containers. Residential routes will get finished quicker as well, and more profits will flow to your bottom line.

### Highest Compaction

The Goliath has long been known for its packing ability, and that won't change with the G400, capable of packing up to 1200 lbs. per cubic yard. Nobody packs a better load than the G400, so you'll stay on the route longer with fewer trips to the landfill.

### Lowest Loading Height, Easy Controls

The Goliath G400 still has the lowest loading height in the industry, which saves wear and tear on your other most valuable asset – your people. Operators will appreciate G400's ease of use, from the loading sill to the straight-forward controls – another E-Z Pack hallmark.

### Superior Container Handling

The G400 offers improved latching and tipper combinations to handle containers, both commercial and residential. With its low loading height and 4 Yd<sup>3</sup> hopper, the G400 will quickly devour containers up to 12 cubic yards. A variety of residential cart tipplers will mount easily on the G400.

### Swing Link Design

Like its Goliath predecessors, the new G400 features a linkage packer design, which means no rollers, slides, or shoes to wear out and replace. And unlike other linkage designs, the G400 does not use slots in the hopper side to guide the packer panel, which can cause troublesome trash buildup. E-Z Pack's swing link packer is a proven dependable, easy-to-maintain packing system.

### Leak-Proof Hydraulics

Hydraulic leaks have long been an issue with other rear loaders, but E-Z Pack solves the problem with leak-proof Fletight seals on all G400 hydraulic fittings. The Fletight seal is a metal stamping with concentric rings that form multiple seals down the face of a flared tubing, and a baked-on Loctite™ sealant to ensure a complete and secure seal. The result is a permanent leak-proof connection.

### Improved Throttle Advance

Most rear loaders use electrical switches to control throttle advance and other tailgate functions, but the G400 uses proximity switches instead for a more dependable, long-lasting solution.

### Flat Panels

The G400 sweep panel and other moving panels are flat – no bolsters or braces necessary. The result is an easy-to-clean panel that won't collect debris or liquids that can cause rust and corrosion.

### Cleaner Hydraulic Routing

The routing of hydraulic components has been simplified for easy maintenance and less chance for debris buildup.

### Powder Coat Paint

Like all E-Z Pack products, the G400 has a powder coat paint finish, which is five times more durable than wet paint. The finish on your G400 should last the life of the body. Your fleet will look better and you'll save money, too. Powder coating is also a greener technology because it does not emit Volatile Organic Compounds (VOCs).
